

ABSTRACT OF THE DISCLOSURE

A wiper device includes a wiper arm that is mounted in
driveable fashion and that bears a wiper blade, the wiper arm
5 being formed by an essentially U-shaped profile part that
surrounds the wiper blade at least partially. The front limb,
which in the installed position points essentially in the
direction of travel of the vehicle, forms a spoiler, and at
least one air outlet opening is situated on the additional
10 limbs. An air guide element, configured to pass through the
profile part, is arranged at least in the inner area of the U-
shaped profile part.
